RoadRunner FAQ

EFILive Support - 2021-06-24 - Comments (0) - RoadRunner Real-Time PCM Emulator

The RoadRunner PCM emulator by Moates.net must be licensed to EFILive's V7 software to allow Realtime editing of the PCM Calibration. RoadRunner is only available with the EFILive V7 software and will not be supported in the EFILive V8 Scan and Tune software or FlashScan V3.

If you plan to perform data scanning or require flashing of your RoadRunner results into a secondary PCM, either **FlashScan V2** (no longer available for purchase) with GM Tuning or **FlashScan V1** Commercial (obsolete) will also be required.

A RoadRunner license is no longer needed for customers running the EFILive April 2021 public release software (or later).

RoadRunner PCM emulator supports the following controllers:

- LS1 PCM.
- LB7 PCM.
