AutoCal V3 Custom Menus

2020-09-08 - EFILive Support - Comments (0) - General

AutoCal V3 customers now have full control of user defined menus, icons, images and themes via the user defined menu configuration.

These same functions will be available to FlashScan V3 customers when FlashScan V3 is released.

The file \Documents\EFILive\V8\User Defined Menus\SampleCustomMenu.txt contained in the V8 Scan and Tune software installation provides a sample custom menu, and documents the requirements for customization.

This feature is available as a free software update to customers running EFILive Public Beta 49 or later.
